AI workspaces for teams with too much context.

Fluso connects to your work apps, remembers project history, and turns scattered communication into tasks, research, files, and finished work. It is built for organizations where the hard part is not generating text - it is knowing what happened, what matters, and what needs to happen next.

Core capabilities

The practical feature set: connect, understand, act, and return with the right context.

01

Connected work context

Search and use Gmail, Calendar, Drive, Slack, GitHub, Linear, web research, files, meetings, and project history.

02

Business context memory

A private operating memory of people, projects, decisions, files, meetings, deadlines, and source-linked evidence.

03

Proactive task detection

Finds open loops in messages and meetings: follow-ups, approvals, waiting items, deadlines, and recurring work.

04

Custom skills

Package repeatable team workflows for research, reporting, analysis, follow-ups, operations, and specialist work.

05

DOC PDF XLS PPT MD

Artifact generation

Creates research briefs, reports, documents, spreadsheets, presentations, drafts, tickets, and project files.

06

Automations

Schedules recurring checks, summaries, reminders, meeting follow-ups, monitoring, and preparation workflows.

Use cases

Executive operations	Daily attention queue, meeting briefs, follow-ups, board and investor prep.
Research and analysis	Market scans, competitor research, diligence memos, sourced reports, monitoring.
Sales and customer work	Account history, call summaries, renewal prep, personalized follow-ups, CRM hygiene.
Product and engineering	Customer feedback synthesis, Linear/GitHub context, specs, release notes, issue research.
Finance and legal ops	Document review, approval tracking, reporting packs, compliance reminders, audit trails.
HR and recruiting	Candidate packets, interview summaries, scheduling, policy answers, offer follow-ups.
Supply and operations	Vendor updates, exception tracking, planning notes, status summaries, escalation queues.
Knowledge management	Find past decisions, update project context, convert meetings and files into usable memory.

Why Fluso fits sensitive work

Open-source models

Model choices are not tied to a closed black box, making Fluso better suited for private work memories and controlled customer environments.

On-premise or VPC

Deploy inside the boundary that matters: on-premises, customer VPC, cloud tenant, or private infrastructure stack.

Built in Switzerland

European product and infrastructure posture, powered by Prem AI infrastructure for customers who care where their intelligence layer runs.
